Education

King Mongkut's Institute of Technology Ladkrabang **2022-2026**

Degree: Bachelor of Science Major: Information Technology GPA: 3.68

Professional Summary

Recent Information Technology graduate with a solid foundation in full-stack web and mobile application development. Through comprehensive academic projects, I have gained practical hands-on experience in end-to-end development, from designing SQL and NoSQL databases to building user interfaces with React, Next.js, and React Native. On the backend, I am capable of developing efficient server-side logic using Express.js and Django. Additionally, I have foundational experience with cloud deployment and containerization, having configured cloud architectures on AWS, and set up automated CI/CD pipelines using Docker and GCP.

Technical Skills & Soft Skills

- **Programming languages:** HTML, CSS, JavaScript, Python
- **Frameworks & Libraries:** Django**,** Express.js, Tailwind CSS, Next.js, React, React Native, PHP
- **Database:** MySQL, PostgreSQL, MongoDB
- **Tools:** GitHub, Docker, Postman
- **Cloud Platforms:** Amazon AWS
- **ERP & Platforms:** Odoo
- **Languages**: Thai(Native), English(Fair)
- **Softskills**: Teamwork & Collaboration, Problem-solving, Adaptability

Work Experience

Dynamics Motion **July 2026 - Oct 2026**

ERP Functional Implementation

- Analyzed business requirements and designed custom Odoo module workflows.
- Developed and implemented Odoo solutions based on technical specifications and process designs.

Awards & Certificates

- **ITC-CSCC 2026 -** Optimized Deep Learning and Mobile Application for Urban Waste Segregation (Thesis Project), Accepted for publication
- **HCCDA Tech Essentials -** Huawei Cloud Certificate

Academic Projects

Thesis Project **July 2025 - Apr 2026**

Developed a mobile waste classification app with a **React Native** frontend and an **Express.js** backend. Evaluated and integrated optimized **deep learning models** (MobileNetV3, GhostNetV2, Resnet101, MobileViT-S, EfficientNetV2), utilizing fine-tuning and data augmentation to ensure high-precision automated sorting. The project is functions as an educational guide to cultivate proper disposal habits and eliminate sorting errors. This ensures high-purity recycling streams, optimizes waste management workflows, and significantly reduces the need for manual post-sorting.

Aerocast — Dec 2024 - Dec 2024

Developed a comprehensive weather forecast website using **Next.js** and **MongoDB**, integrating the OpenWeather API to provide data including temperature, PM2.5 levels, and daily forecasts. The website incorporates an interactive global map using Open Street Map to visualize environmental metrics worldwide, while allowing users to search for cities and save favorite locations for personalized tracking. This project delivers weather and PM2.5 data into actionable health and safety recommendations. It optimizes daily planning and enhances public awareness of environmental conditions.

Warehouse management system — Feb 2025 - Mar 2025

Developed a microservices-based inventory platform utilizing **Express.js** for backend services, **React** for the user interface, and **Tailwind CSS** for responsive styling. Implemented **RabbitMQ** to facilitate asynchronous, message-based communication between decoupled services; built an automated workflow where inventory mutations (additions/deletions) publish messages to a queue, prompting the Stock service to consume and execute stock adjustments. eliminated tight coupling between services, resulting in improved application scalability and data synchronization.

OFFlearn — Sep 2024 - Oct 2024

Developed a learning management system (LMS) using **Django**, with a user interface built with **HTML**, **CSS (Tailwind CSS)**, and **JavaScript**. The system enabled instructors to create and manage courses, including adding learning topics, uploading files, and creating quizzes with various question types (multiple-choice, essay). Students could search for courses, enroll, access learning materials, and take quizzes.

MEM-MED — Sep 2024 - Oct 2024

Developed a Medicine Reminder Calendar web application to streamline prescription management for small clinics. Built the frontend with **HTML**, **CSS**, **Bootstrap**, and **JavaScript**, while utilizing **Django** and **PostgreSQL** for the backend. Deployed the system on **AWS** infrastructure, applying fundamental cloud best practices for reliability. Additionally, I established an automated CI/CD pipeline using **Jenkins**, **Docker**, and **GitHub Webhooks**. The platform enables doctors to schedule specific medication times, generating an intuitive daily calendar for patients that eliminates confusion and significantly improves treatment adherence.

Minor Cineplex — Sep 2023 - Oct 2023

Developed a movie ticket booking website using **PHP** for the backend, **MySQL** as the database, and a user interface built with **HTML**, **CSS**, and **Bootstrap**. The system enabled users to buy movie ticket, apply available promotions, and view their purchase history. Administrators could add or edit movies and showtimes.

JQueue — April 2023 - May 2023

Developed a teacher assistant appointment booking app using **JAVA,** Applying **OOP** principle.

Word guessing game — Nov 2022 - Dec 2022

Developed a simple game using **Python** as the base language, tkinter for the graphical user interface, and pygame for game development tools.
